AUGUST 21, 1981

WE'LL DO IT . . . "We'll do it," were the words of our General Manager when presented with a difficult sales and manufacturing opportunity. To get an order for a 34 Super II from Columbus Foundry, Columbus, Georgia, the manufacturing time had to be slashed in half — eight weeks to four.

Knowing that this would provide work for the team and beat the competition, **Jim Schroeder** said, "We'll do it!"

Failure is not in the vocabulary of our team, but everyone should know that our failure to meet the delivery date of September 18, would cost us a monetary penalty.

Remember Operation Navy? Teamwork got that job done. Teamwork will do the job again.

This is what we are going to build in four weeks for Columbus Foundry.

NEW FACES . . . A Wheelabrator welcome to:

PROFIT IMPROVEMENT . . . The second phase of a three-phase program to reduce the cost of manufacturing Balcrank revolving handles has been implemented. The installation of fixtures for a more productive assembly of the handles has been completed and is now in operation.

The project, headed by Senior Process Engineer **Oakley Campbell**, incorporates many of his design and assembly ideas. Production runs made on the fixture indicate the predicted cost savings of an estimated \$12,000 annually and an increase in production of at least 25 percent. Another example of Wheelabrator ingenuity — thanks to Oakley.

Balcrank Light Assembler **Ginny Collins** (r), Foreman **Paul Crabtree** (center) and **Oakley** examine one of the new fixtures.
